

Can a router be used if it s not fiber optic

Overview

Any standard router, including the primary unit of a mesh Wi-Fi system, will work at its full potential with any standard Internet broadband terminal device —modem, Fiber-optic ONT, or others. However, some internet providers may require specific router settings or equipment, so it's important to check with your provider or. A fiber router is designed to work specifically with fiber optic internet connections, providing faster and more reliable speeds compared to a normal router that typically works with traditional broadband connections. Fiber routers are able to handle higher bandwidth demands and offer lower. In short, the answer is both yes and no. It entirely depends on what kind of internet connection you have, and what you intend to do with your router.
