

## Can fiber optic cable laying frames be used outdoors

### Overview

With water and UV resistance in addition to being made of materials that will not be compromised in harsh environments, outdoor cables are specialized equipment that, while often costing more than normal fiber-optic cables, will perform better outdoors and underground. This principle allows fiber optic internet to deliver high-speed connections even in harsh outdoor environments. You should maintain proper cable. The Professional Association Of Fiber Optics [www.org](http://www.org) The Fiber Optic Association, Inc. (FOA) was founded in 1995 to help develop the workforce to build the fiber optic networks to support a rapid expansion in communications and the Internet. Protecting them is essential for long-term reliability. Tightening of the reel bolts and maintaining reel tension during payout may reduce the chances of this cable damage during handling and installation.
