

Can network cabinets be placed horizontally

Overview

There are horizontal and vertical orientations — which are single or double sided — to suit a range of applications. One of the most misunderstood aspects of router placement concerns antenna patterns. Most routers with vertical antennas radiate in a horizontal donut shape, strong signal travels sideways, while the area directly above and below receives weaker coverage. What this means in practice: This simple. Structurally, it includes the cabling components, such as copper or fiber cables, patch panels, and cross-connects, laid out horizontally, hence the name. Most all Sun servers are designed for rackmounting in cabinets or racks that comply with the EIA 310D standard.
