

## Can the Huijue gigabit PoE switch be connected to fiber optic cables

### Overview

Power over Ethernet (PoE) does not work directly over fiber-optic cables because fiber-optic cables are designed to transmit data using light, and they do not conduct electricity. PoE requires copper cables (such as Cat5e, Cat6, or Cat6a) to deliver both power and data. its full name is "ethernet power switch". This is a perfect match for the surveillance camera! no more pulling a bunch of power cords, no need to worry about not having enough sockets~ This tp. PoE is an ideal technology for home and enterprise use, enabling a single cable to provide both data connection and electric power to devices such as IP cameras, WIFI access points, and optical network terminals. IoT, smart homes, IP security systems, and digital signs are all applications. The Gigabit Interface Converter (GBIC) or Small Form-factor Pluggable (SFP) port is a modular interface that offers flexibility to network administrators in terms of their networking hardware. Discover the advantages of using fiber optic cables in conjunction with PoE and gain insights into the necessary components required for.
