

Fiber Optic Cable Armor Connection Method

Overview

This guide provides a complete installation process for armored fiber optic cords, explaining each step from routing and pulling to stripping, cleaning, and testing. Before starting the installation, it's essential to select the right type of armored fiber cable based on your application. Armored fiber cable is a fiber optic cable reinforced with additional protective layers to enhance its durability and resistance to external damage. These cables are designed to endure extreme environmental conditions, physical strain, and potential interference. To ensure all specifications are met, consult the specific cable specification sheet for the cable you. Using an armor cutting tool remove 18 to 24 inches of armor to expose the core cable. Insert the cable and armor into the wire mesh pulling grip. This helps ensure reliable.
