

How long should the cable for the elevator distribution box be

Overview

super-flex steel center cables are required for use in installations where the suspended length of the cable exceeds 61 m • 200 ft (NeC Article 620-41) although they may be used for shorter runs. It works alongside a motor and pulley system, which enables the vertical movement of. Even non-composite fiber-optic cable, which does not carry electrical energy, is subject to the code. This is because the material may contribute fuel to a fire that has originated elsewhere. Grounding and bonding follow Article 250 and GFCI protection is required at pit, machine-room and car-top receptacles. Emergency or standby. NEC Article 620 outlines the requirements for the installation, operation, and maintenance of various lifting devices, including elevators, dumbwaiters, escalators, moving walks, platform lifts, and stairway chairlifts. 21 suggests that there is neither an exclusion of use, nor a limitation of distance. Draka Elevator offers complete kits with all of the components necessary to.

Article Content

NEC Article 620: Elevators, Part 2

With the elevator car at the bottom landing, it is the length of cable as measured from the point of suspension in the hoistway to the bottom of the loop. Thus, the traveling cable must be ...

Super-Flex® Traveling Cable Installation Guide

super-flex steel center cables are required for use in installations where the suspended length of the cable exceeds 61 m • 200 ft (NeC Article 620-41) although they may be used for shorter runs. Do not ...

NEC Article 620 Elevators, Part 2

Traveling cables are to be approved for hazardous locations and must comply with the appropriate sections for each hazardous-location class that covers use of flexible cords.
