

How to change a fiber optic router to bridge mode

Overview

Find bridge mode — look under "Advanced", "Internet", or "Gateway" settings. Enable bridge mode — this disables WiFi and routing on the gateway. Configure your router — your router now handles all routing . Is your ONU holding your Wi-Fi router back?

This guide dives deep into Bridge Mode ONU, explaining how this simple setting can eliminate double NAT, reduce latency, and give you full control over your network. Login to your gateway — access your ISP modem/router at its default IP. This obliterates bottlenecks, solves the dreaded Double NAT problem, and gives you granular control that stock hardware simply can't offer. In this definitive guide. To do this on our network, you'll have to enable the Bridge Mode feature on your wireless gateway, which turns off its routing capabilities while leaving the modem capabilities on. Then, you may connect and use your own router. However, if you have a G Fiber Multi-Gig Router without a wall-mount Fiber Jack, or a complex network setup (like multiple static IPs), you will need to use bridge mode.
