

## How to change router settings when you have fiber optic internet

### Overview

To set up your router for fiber internet quickly, connect the router to your fiber modem, access the router's settings via a web browser, and input the provided ISP credentials. Make sure to update the firmware, configure Wi-Fi security, and customize your network name for optimal performance. If you want to do anything like change the name of your Wi-Fi network, update your Wi-Fi password or set parental controls, you have to log into your router's software, also known as firmware. You can set up an IP reservation so that a device on your network uses the same IP address every time it. Accessing router settings is a fundamental skill that allows you to customize various aspects of your home network, from renaming your router and changing passwords to setting up advanced security measures. Whether you are using a router provided by your Internet Service Provider (ISP) or have. The advanced settings allow you to configure more technical options. In this article, we'll show you how to set up.
