

## How to match the circuit breaker in a smart distribution box

### Overview

You must match the breaker size to the wire size. IEC (Europe/UK/China): Brown is Live, Blue is Neutral, Green/Yellow is Earth. NEC (USA/Canada): Black (or Red) is Live, White is Neutral, Green (or Bare) is Ground. How do you know which circuit breaker to use?

Can you add more breakers later?

Why do you need GFCI or AFCI breakers?

Choosing the right size and setup for your distribution box keeps your electrical system safe and working well. Proper setups ensure balanced electrical loads, ground fault protection, and easy maintenance. Common configurations include single-phase for homes and three-phase for commercial buildings. In the following wiring tutorial, we will demonstrate how to install a new smart load center or upgrade an existing standard load center to a smart load center. This upgrade enhances convenience, whether you are at home or away. With a smart load center, you can remotely monitor and control your power. Turn OFF all power to the panelboard by moving the handle of the main breaker to OFF position. Instead of endless breaker flipping to find which one controls the outlets and lights in a specific area, a circuit breaker finder.
