

No Internet access when the switch is connected via network cable

Overview

The main guidance steps ask the poster to first rule out cable/port/router issues, then verify whether the adapter is getting a proper IP gateway (not an APIPA/169. x address), and finally reset the network stack (release/renew IP, flush DNS, and reset Winsock/TCP/IP) . However, encountering issues such as your Ethernet connection showing "No Internet Access" while still connected can be frustrating. This issue can stem from various causes, including hardware malfunctions, configuration errors, or problems with your Internet Service Provider (ISP). Here we will list some common factors in this article. Check LED lights. Running the "Network and Internet" troubleshooter and updating the drivers can help fix most Ethernet-related issues, including this one. Check LED lights. Your Ethernet cable is plugged in, but your computer still says no internet connection?

The problem usually stems from a misconfigured network setting, a faulty device along the path (router, modem, or even the Ethernet cable itself), or a simple driver issue. This article provides a comprehensive.
