

Parameters of 4-core single-mode optical cable

Overview

Fiber optic 4-core round drop cable consists of four parts, PE plastic cover, multi-strand aramid yarn, PBT loose tube with jelly compound and optical fiber. These parts work together to make communications faster, safer, more reliable, and more useful. 4 Core Optical Fiber Cable Specification Optical Fiber Cable 4 Core Key Features ● LC to LC or SC to SC ● Single-mode /multimode for option ● OM3 for multimode ● Optical Fiber 4 Cores Inside ● Compatible with all standard fibre optic equipment and connectors ● Stainless Steel sheathed and metal. This document outlines the specifications for a single-mode optical fiber and cable designed for use around the 1310 nm zero-dispersion wavelength, suitable for both the 1310 nm and 1550 nm regions, and compatible with analogue and digital transmission. It details the fiber's geometrical, optical. A 4-core single-mode fiber optic cable is a high-performance telecommunications solution designed to support long-distance, high-bandwidth data transmission. These cables utilize four individual single-mode fibers within a single sheath, enabling parallel data channels, redundancy, or. Loose tube construction, tubes jelly filled, elements (tubes and filler rods) and water blocking yarns laid up around non-metallic central strength member, polyester yarns used to bind the cable core, water blocking tape and mica tape, dry core, then LSZH outer sheath with two red strips. They are used to connect final user to FTTH or GPON line. Renka Single Mode Optical Fiber Cables are constructed with Dispersion Unshifted Single Mode Optical Fibers, with a matched cladding. Matched clad fibers feature a dual UV curable acrylate.
