

Relay protection testing is divided into

Overview

Protective relay testing is usually divided into three categories: acceptance testing, commissioning, and maintenance testing. Acceptance or evaluation testing determines whether a relay is appropriate for use on a specific protection application within a power system. During this testing. The testing and verification of relay protection devices can be divided into four groups: This course is suitable for engineers with a desire to understand the fundamentals of protection relay testing and commissioning. It covers basic testing terminology, various tests including factory. These systems are designed to identify abnormal conditions (which might include internal faults, short circuits (or) inappropriate operating currents) & isolate the faulty portion in order to avoid equipment damage, system instability (or) safety risks.
