Structure of Optical Cable Pulling Machine

Overview

Let's break down the main parts of this machine: Motor: The motor powers the machine, giving it the strength to pull cables. Drum: This is where the optical cable is wound before pulling. An optical cable pulling machine is a specialized tool used in telecommunications and infrastructure projects to safely and efficiently install fiber optic cables through conduits, ducts, and overhead lines. Variable speed with push button force selection, this tool can be used inside having no emissions. The Hydraulically Limited Cable Puller is designed to offer exceptional value while. Cable Puller, Power Cable Optical Cables Pulling Machine^ Mainly used for various cable production lines for single machine or front and rear double traction. - SCOPE This document covers all the activities usually performed by PRYSMIAN for on-site installation of OPGW fibre optic cables, including transport, installation, accessory assembly, verification of optical.
