

Telecom 8-core optical fiber cable wiring sequence

Overview

Under the TIA/EIA-598-C standard, the universal 12-color sequence is: 1-Blue, 2-Orange, 3-Green, 4-Brown, 5-Slate (Gray), 6-White, 7-Red, 8-Black, 9-Yellow, 10-Violet, 11-Rose, and 12-Aqua. This sequence repeats for cables with more than 12 fibers. The Global Consistency: Whether cables originate in North America, Europe, or Asia, the same 12-color sequence applies—so any technician can interpret it correctly. * For cables >12 fibers: The sequence repeats with one or more black stripes (except black fibers, which receive yellow stripes) to eliminate the need to lash a fiber optic cable to a messenger. A figure 8 fiber optic cable consists of three strands, eliminating the need to purchase a separate messenger wire and lashing wire. The labor cost can be greatly reduced in that there is only one installation job, installing the figure 8 cable. This product has integrated extra high strength (EHS) stranded steel messenger wire as a support strand which provides high tensile strength to the cable and make them ideal to be used for aerial outdoor applications.
