PDU (Power Distribution Unit) is responsible for the power distribution and management in the high-voltage system of new energy vehicles, providing charging and discharging control, high-voltage component power-on control, circuit overload and short-circuit protection, high-voltage sampling. Discover our HV PDU solutions – the powerful high-voltage power distribution units from 60 VDC to 1000 VDC for mobile machines and commercial vehicles. Our HV PDUs are characterized by a compact and robust design that enables flexible configuration options and the integration of a wide range of . In electric vehicles, the Battery Disconnect Unit (BDU) acts as the safety gate that connects or isolates the high-voltage battery, while the Power Distribution Unit (PDU) functions as the distribution hub, delivering power to multiple vehicle subsystems. In other words, all heavy vehicles on land and water that require high voltages for electric propulsion. The HV PDU (High-voltage Power Distribution. A Power Distribution Unit (PDU) is the vehicle hardware that safely routes electrical power from the source (battery and low-voltage bus) to loads across the vehicle. Our HV PDUs, which combine our high-voltage DC contactors and fuses with current sensing, thermal protection, on-board charging, and other capabilities, are flexible and ready to handle the challenges and alternative energy applications.
