

## What is a tee in a cable tray

### Overview

A ladder type cable tray tee is a fitting used to create a branch in a cable tray system, allowing cables to be routed in three directions. Its "T" shape provides a secure and efficient way to split cables from a main tray into two separate paths, ensuring organized and flexible. Horizontal Tees link three 10" straight channel sections or compatible transitional fittings, enabling the creation of a sleek and efficient horizontal branch within a fiber routing system. Item code: HT Reducing Tee: W1>W2. Item code: . The main types of accessories are categorized by their function: Fittings change the path or size of the run, including Elbows (for horizontal or vertical direction changes), Tees and Crosses (for multi-directional junctions), and Reducers (to transition between different tray widths). Materials and finishes available are mild steel pre galvanized as standard with mild steel hot dip galvanized after manufacture and stainless steel grade. UMI unequal horizontal tees and crosses are designed to provide flexibility in cable routing, especially in situations where cable paths need to diverge or converge with varying cable loads. Vertical bend, horizontal bend, cross and horizontal tee.
