

What to do if the core in the optical module is bent

Overview

The solution is to unplug the fiber and reinsert it into the SFP module interface until a “click” sound is heard, indicating the fiber connector and SFP module are properly connected. Contamination or damage on the fiber end face requires the use of a fiber end-face inspection. As core components of optical communication systems, the proper installation and use of optical modules directly impacts network stability. This article systematically identifies common anomalies during optical module installation. However, locating the fault does not always mean it can be resolved—if the hardware is damaged, the issue can only be fixed by replacing the module. As. This guide explores these frequent issues and offers practical solutions, highlighting how quality products like LINK-PP optical transceivers can mitigate risks.
