

Which part is referred to as the main cable tray

Overview

Straight Sections: The long, straight lengths of tray that form the main cable runs. They are available in various standard lengths. **Fittings (Bends and Tees):** These components allow the system to change direction and branch out. Together, these parts form a complete cable management system used to support, route, protect, and organize cables in industrial, commercial. To carry one or more cables from the main tray system to the vicinity of the cable termination. One method of getting cable to exit cable tray is the drop out method, what is it?

Exiting cables out the end of the tray or in-between two rungs. Think of it as a sophisticated “highway” for cables, keeping them organized, protected, and easily accessible. A cable tray system is a unit or assembly of units or sections with associated fittings forming a rigid structural system used to securely fasten or support cables, raceways, and boxes [392].
